Algorithmic Adventures-Juraj Hromkovič 2009-06-22 The first and foremost goal of this lecture series was to show the beauty, depth and usefulness of the key ideas in computer science. While working on the lecture notes, we came to understand that one can recognize the true spirit of a scientific discipline only by viewing its contributions in the framework of science as a whole. We present computer science here as a fundamental science that, interacting with other scientific disciplines, changed and changes our view on the world, that contributes to our understanding of the fundamental concepts of science and that sheds new light on and brings new meaning to several of these concepts. We show that computer science is a discipline that discovers spectacular, unexpected facts, that finds ways out in seemingly unsolvable situations, and that can do true wonders. The message of this book is that computer science is a fascinating research area with a big impact on the real world, full of spectacular ideas and great challenges. It is an integral part of science and engineering with an above-average dynamic over the last 30 years and a high degree of interdisciplinarity. The goal of this book is not typical for popular science writing, which often restricts itself to outlining the importance of a research area. Whenever possible we strive to bring full understanding of the concepts and results presented.

From this foundation it explores the much wider issues that are inevitably raised but somehow marginalized in lexicology (the study of words) and corpus linguistics: how are individual words integrated into language? What are the real benefits of studying the

large quantities of text now available in corpora? How do we best conceptualize meaning itself?>

Selected Papers on Automath-R.P. Nederpelt 1994-10-20 The present volume contains a considered choice of the existing literature on Automath. Many of the papers included in the book have been published in journals or conference proceedings, but a number have only circulated as research reports or have remained unpublished. The aim of the editors is to present a representative selection of existing articles and reports and of material contained in dissertations, giving a compact and more or less complete overview of the work that has been done in the Automath research field, from the beginning to the present day. Six different areas have been distinguished, which correspond to Parts A to F of the book. These areas range from general ideas and motivation, to detailed syntactical investigations.

When Ladies Go A-Thieving-Elaine S. Abelson 1992-07-09 This book focuses on middle-class urban women as participants in new forms of consumer culture. Within the special world of the department store, women found themselves challenged to resist the enticements of consumption. Many succumbed, buying both what they needed and what they desired, but also stealing what seemed so readily available. Pitted against these middle-class women were the management, detectives, and clerks of the department stores. Abelson argues that in the interest of concealing this darker side of consumerism, women of the middle class, but not those of the working class, were allowed to shoplift and plead incapacitating illness--kleptomania. The invention of kleptomania by psychiatrists and the adoption of this ideology of feminine weakness by retailers, newspapers, the general public, the accused women themselves, and even the courts reveals the way in which a gender analysis allowed proponents of consumer capitalism to mask its contradictions.

When Brothers Dwell Together-Frederick E. Greenspahn 1994 Although primogeniture is commonly assumed to have prevailed throughout the world and firstborns are regarded as most likely to achieve success, many of the most prominent figures in biblical literature are younger offspring, including Isaac, Jacob, Joseph, Moses, Samuel, David, and Solomon. Central to the plot of most biblical stories, the sibling relationships depicted are rarely harmonious, and the surprising preference for younger siblings is an intriguing and unexplained pattern. Using evidence from a wide range of disciplines. Frederick E. Greenspahn presents a seminal interpretation of this phenomenon. In this study, he demonstrates that ancient Israelite fathers were in fact free to choose their primary heirs. The Bible's

propensity for younger offspring, Greenspahn shows, reflects neither a legally mandated norm nor a protest against the prevailing custom, but rather conforms to a widespread folk motif, evoking innocence, vulnerability, and destiny. Within the biblical context, this theme heightens God's role in supporting ostensibly unlikely heroes. Drawing on the resources of law, anthropology, folklore, and linguistics, Greenspahn shows how, in portraying younger siblings triumphing over older ones, these tales serve as complex parables of God's relationship to his chosen people, and reflect Israel's own discomfort with the contradiction between its theology of election and the reality of political weakness.

The Electromagnetic Origin of Quantum Theory and Light-Dale Mills Grimes 2005 This book resolves fundamental questions of quantum theory and offers arguably the strongest evidence yet in support of string theory. It is essential reading for everyone in physics, physical mathematics, and the philosophy of science. The authors model electrons as an ensemble of strings subject to the laws of classical statistical mechanics. This model shows the Schrodinger equation to be the low speed descriptor of equilibrium and near-equilibrium states but not of quantum jumps. Like other statistical systems, the electron ensemble passes through all possible intrinsic states. As a high energy eigenstate electron ensemble passes through an appropriate structure, it regeneratively produces an encompassing standing energy field. Regenerative field buildup enables the electron to be a radiative band pass filter: it is an efficient radiator at the buildup frequency and phase, but all other frequencies and phases are blocked. When a matching external field trigger is applied depending upon the relative phasings, the standing energy is either absorbed or emitted with full directivity.
