<p>Guidance for National Tuberculosis Programmes on the Management of Tuberculosis in Children-Who Global Tb Programme 2015-02-05 It is estimated that one third of the world's population is infected with Mycobacterium tuberculosis (the bacterium that causes tuberculosis (TB)), and that each year, about 9 million people develop TB, of whom about 2 million die. Of the 9 million annual TB cases, about 1 million (11%) occur in children (under 15 years of age). Of these childhood cases, 75% occur annually in 22 high-burden countries that together account for 80% of the world's estimated incident cases. In countries worldwide, the reported percentage of all TB cases occurring in children varies from 3% to more than 25%. The Stop TB Strategy, which builds on the DOTS strategy developed by the World Health Organization (WHO) and the International Union Against TB and Lung Disease, has a critical role in reducing the worldwide burden of disease and thus in protecting children from infection and disease. The management of children with TB should be in line with the Stop TB Strategy, taking into consideration the particular epidemiology and clinical presentation of TB in children. These consensus guidelines were produced to help the National Tuberculosis Programmes on the management of tuberculosis in children.</p>

<p>Global Tuberculosis Report 2014-World Health Organization 2015-02-20 This is the nineteenth global report on tuberculosis (TB) published by WHO in a series that started in 1997. It provides a comprehensive and up-to-date assessment of the TB epidemic and progress in implementing and financing TB prevention care and control at global regional and country levels using data reported by over 200 countries that account for over 99% of the world's TB cases. The report is accompanied by a special supplement that marks the 20th anniversary of the establishment of the Global Project on Anti-TB Drug Resistance Surveillance. The supplement highlights the latest status of knowledge about the epidemic of multidrug-resistant TB (MDR-TB) and the programmatic response. The report has 9 main chapters. The introductory chapter provides general background on TB as well as an explanation of current global targets for TB control the WHO's Stop TB Strategy that covers the period 2006-2015 and the post-2015 global TB strategy that was recently endorsed by all Member States at the 2014 World Health Assembly. The remaining eight chapters cover the disease burden caused by TB (incidence prevalence mortality); a special assessment (countdown to 2015) of progress towards 2015 global TB targets at global regional and country level; TB case notifications and treatment outcomes; drug resistance surveillance among TB patients and the programmatic response in detecting and providing treatment for multidrug-resistant TB; diagnostics and laboratory strengthening for TB; addressing the co-epidemics of TB and HIV; financing TB care and control; and research and development for new TB diagnostics drugs and vaccines. The three annexes of the report include an explanation of how to access and use the online global TB database one-page profiles for 22 high TB-burden countries and one page regional profiles for WHO's six regions.</p>

<p>Diagnostic Meta-Analysis-Giuseppe Biondi-Zoccai 2018-07-24 This book is the first exclusively devoted to the systematic synthesis of diagnostic test accuracy studies. It builds upon the major recent developments in reporting standards, search methods, and, in particular, statistical tools specifically devoted to diagnostic studies. In addition, it borrows extensively from the latest advances in systematic reviews and meta-analyses of intervention studies. After a section dedicated to methods for designing reviews, synthesizing evidence and appraising inconsistency in research, the application of these approaches is demonstrated in the context of case studies from various clinical disciplines. Diagnosis is central in medical decision-making, and in many other fields of human endeavor, such as education and psychology. The plurality of sources of evidence on diagnostic test accuracy poses a huge challenge for practitioners and researchers, as do the multiple dimensions of evidence validity, which include sensitivity, specificity, predictive values, and likelihood ratios. This book offers an invaluable resource for anyone aiming to improve decision-making processes in diagnosis, classification or risk prognostication, from epidemiologists to biostatisticians, radiologists, laboratory physicians and graduate students, as any physician interested in refining his methodological skills in clinical diagnosis.</p>
<p>Meaning-Centered Group Psychotherapy for Patients with Advanced Cancer-William Breitbart 2014 The importance of spiritual well-being and the role of "meaning" in moderating depression, hopelessness and desire for death in</p>

terminally-ill cancer and AIDS patients has been well-supported by research, and has led many palliative clinicians to look beyond the role of antidepressant treatment in this population. Clinicians are focusing on the development of non-pharmacologic interventions that can address issues such as hopelessness, loss of meaning, and spiritual well-being in patients with advanced cancer at the end of life. This effort led to an exploration and analysis of the work of Viktor Frankl and his concepts of logotherapy, or meaning-based psychotherapy. While Frankl's logotherapy was not designed for the treatment of patients with life-threatening illnesses, his concepts of meaning and spirituality have inspired applications in psychotherapeutic work with advanced cancer patients, many of whom seek guidance and help in dealing with issues of sustaining meaning, hope, and understanding cancer and impending death in the context of their lives. Individual Meaning-Centered Group Psychotherapy (IMCP), an intervention developed and rigorously tested by the Department of Psychiatry & Behavioral Sciences at Memorial Sloan-Kettering Cancer Center, is a seven-week program that utilizes a mixture of didactics, discussion and experiential exercises that focus around particular themes related to meaning and advanced cancer. Patients are assigned readings and homework that are specific to each session's theme and which are utilized in each session. While the focus of each session is on issues of meaning and purpose in life in the face of advanced cancer and a limited prognosis, elements of support and expression of emotion are inevitable in the context of each group session. The structured intervention presented in this manual can be provided by a wide array of clinical disciplines, ranging from chaplains, nurses, palliative care physicians, to counselors, psychotherapists, social workers, graduate psychology students, psychologists and psychiatrists.

<p>Dysphagia Evaluation and Treatment-Eiichi Saitoh 2017-11-13 This book presents a comprehensive approach to treating dysphagia that has been successfully applied in actual rehabilitation settings. Its main purposes are firstly to equip readers with a strong conceptual understanding of swallowing evaluation and treatment, secondly to provide guidance on the procedure of practical comprehensive dysphagia rehabilitation in real-world settings, and thirdly to update readers on the latest diagnostic and treatment technologies. To do so, it employs the concept of swallowing rehabilitation pioneered at Fujita Health University Rehabilitation. The book is divided into 4 major sections, the first of which introduces readers to the general aspects and the principle of deglutition. In turn, Part II offers clinical approaches to both non-instrumental and instrumental evaluation of swallowing. Part III addresses treatment options in swallowing rehabilitation, especially exercises based on motor learning. Lastly, Part IV highlights three clinical cases demonstrating clinical approaches in dysphagic patients. Readers will find this text useful both as an initial guide and a reference work for assisting clinicians, allowing them to further expand swallowing assessment and treatment, and facilitating the development of swallowing rehabilitation in real-world settings in education and rehabilitation.</p>

Multiple Myeloma-Morie A. Gertz 2013-10-01 This is a comprehensive, state-of-the-art guide to the diagnosis, treatment, and biology of multiple myeloma and related plasma disorders. Edited and written by a multidisciplinary group of recognized authorities from the Mayo Clinic, it presents clear guidelines on diagnosis and therapy and covers all aspects of multiple myeloma, from molecular classification and diagnosis, to risk stratification and therapy. Closely related plasma cell disorders such as solitary plasmacytoma, Waldenstrom macroglobulinemia, and light chain amyloidosis are discussed in detail as well. The book addresses often overlooked topics, including the role of radiation therapy, vertebral augmentation, and supportive care. Our understanding of this group of disorders is developing at an unprecedented rate, and Multiple Myeloma meets the need among oncologists and hematologists for a clear, timely, and authoritative resource on their biology, diagnosis, and treatment.

<p>Nearly Zero Energy Building Refurbishment-Fernando Pacheco Torgal 2013-10-22 The recast of the Energy Performance of Buildings Directive (EPBD) was adopted by the European Parliament and the Council of the European Union on 19 May 2010. For new buildings, the recast fixes 2020 as the deadline for all new buildings to be "nearly zero energy" (and even sooner for public buildings - by the end of 2018). This book gives practitioner an important tool to tackle the challenges of building refurbishment towards nearly zero energy. This book is welcome at this time and sets the scene for professionals whether practitioners or researchers to learn more about how we can make whether old or new buildings more efficient and effective in terms of energy performance.</p>

<p>Hormones and the Endocrine System-Bernhard Kleine 2016-02-11 This book focuses on hormones, and on how they are produced in very diverse regions of the body in humans and animals. But hormones can be found not only in vertebrates, but also in insects, shellfish, spiders, mollusks, even at the origin of metazoan diversification and exhibit the same pathways of synthesis. The book addresses the different classes of hormones: protein/peptides hormones, steroids and juvenile hormones and hormones like catecholamines, thyroid hormones and melatonin. It also discusses the types of hormone receptors, the majority of which are heptahelical G-protein coupled receptors or nuclear receptors. Particular attention is paid to the organs where hormones are created, with specifics on hormonal production and release, while a dedicated chapter details hormonal regulation from very simple to highly complex schemes. The remarkable kinetics of hormones production are also shown, before the book is rounded out by chapters on evolution in the endocrine system, the genetics of endocrine diseases and doping.</p>

<p>From Paralysis to Fatigue-Edward Shorter 2008-06-30 The first book to put the physical symptoms of stress in their historical and cultural context. This fascinating history of psychosomatic disorders shows how patients throughout the centuries have produced symptoms in tandem with the cultural shifts of the larger society. Newly popularized diseases such as "chronic fatigue syndrome" and "total allergy syndrome" are only the most recent examples of patients complaining of ailments that express the truths about the culture in which they live.</p>
