Piper in the Woods-Philip K. Dick 2012-06-01 Under extreme duress, the human mind can come up with an array of impossibly complex coping mechanisms. Is that what's behind the strange epidemic that army physician Henry Harris has noticed overtaking soldiers who have returned from the distant celestial body known as Asteroid Y-3? Dick's unique brand of suspenseful science fiction will love this twisted tale.

A Short History of Circuits and Systems-Franco Maloberti 2016-04-26 After an overview of major scientific discoveries of the 18th and 19th centuries, which created electrical science as we know and understand it and led to its useful applications in energy conversion, transmission, manufacturing industry and communications, this Circuits and Systems History book fills a gap in published literature by providing a record of the many outstanding scientists, mathematicians and engineers who laid the foundations of Circuit Theory and Filter Design from the mid-20th Century. Additionally, the book records the history of the IEEE Circuits and Systems Society from its origins as the small Circuit Theory Group of the Institute of Radio Engineers (IRE), which merged with the American Institute of Electrical Engineers (AIEE) to form IEEE in 1963, to the large and broad-coverage worldwide IEEE Society which it is today. Many authors from many countries contributed to the creation of this book, working to a very tight time-schedule. The result is a substantial contribution to their enthusiasm and expertise which it is hoped that readers will find both interesting and useful. It is sure that in such a book omissions will be found and in the space and time available, much valuable material had to be left out. It is hoped that this book will stimulate an interest in the marvellous heritage and contributions that have come from the many outstanding people who worked in the Circuits and Systems area.

The Car Hacker's Handbook-Craig Smith 2016-03-01 Modern cars are more computerized than ever. Infotainment and navigation systems, Wi-Fi, automatic software updates, and other innovations aim to make driving more convenient. But vehicle technologies haven't kept pace with today's more hostile security environment, leaving millions vulnerable to attack. The Car Hacker's Handbook will give you a deeper understanding of the computer systems and embedded software in modern vehicles. It begins by examining vulnerabilities and providing detailed explanations of communications over the CAN bus and between devices and systems. Then, once you have an understanding of a vehicle's communication network, you'll learn how to intercept data and perform specific hacks to track vehicles, unlock doors, glitch engines, flood communication, and more. With a focus on low-cost, open source hacking tools such as Metasploit, Wireshark, Kayak, can-utils, and ChipWhisperer, The Car Hacker's Handbook will show you how to: -Build an accurate threat model for your vehicle -Reverse engineer the CAN bus to fake engine signals -Exploit vulnerabilities in diagnostic and data-logging systems -Hack the ECU and other firmware and embedded systems -Feed exploits through infotainment

and vehicle-to-vehicle communication systems –Override factory settings with performance-tuning techniques
–Build physical and virtual test benches to try out exploits safely If you're curious about automotive security and have the urge to hack a two-ton computer, make *The Car Hacker's Handbook* your first stop.

Creep-Resistant Steels-Fujio Abe 2008-03-14 Creep-resistant steels are widely used in the petroleum, chemical and power generation industries. Creep-resistant steels must be reliable over very long periods of time at high temperatures and in severe environments. Understanding and improving long-term creep strength is essential for safe operation of plant and equipment. This book provides an authoritative summary of key research in this important area. The first part of the book describes the specifications and manufacture of creep-resistant steels. Part two covers the behaviour of creep-resistant steels and methods for strengthening them. The final group of chapters analyses applications in such areas as turbines and nuclear reactors. With its distinguished editors and international team of contributors, Creep-resistant steels is a valuable reference for the power generation, petrochemical and other industries which use high strength steels at elevated temperatures. Describes the specifications and manufacture of creep-resistant steels Strengthening methods are discussed in detail Different applications are analysed including turbines and nuclear reactors

Of the Greatest Generation-Michael Stafford 2016-10-10 Mike Stafford tells the story of his father with humor and understanding. Through many hours of interviews, Mike relives his father's experience during World War II and what it was like for a naïve young man to face death for the first time. His father spoke of snipers firing at him and remembering that "just a few months ago, I was running for a touchdown and now I was running for my life." After the war, Lyle continued to serve his country at the Pine Bluff Arsenal, married and raised a large family, and died at the age of 86. Mike recalls that if not for the atomic bombing of Hiroshima and Nagasaki that ended the war, he and the rest of his siblings would not be here. Not only is this Lyle's story, but the story of innumerable survivors of the "Greatest Generation" dying out at the rate of 1200 per day.

The Technological and Economic Future of Nuclear Power-Reinhard Haas 2019-01-01 This open access book discusses the eroding economics of nuclear power for electricity generation as well as technical, legal, and political acceptance issues. The use of nuclear power for electricity generation is still a heavily disputed issue. Aside from technical risks, safety issues, and the unsolved problem of nuclear waste disposal, the economic performance is currently a major barrier. In recent years, the costs have skyrocketed especially in the European countries and North America. At the same time, the costs of alternatives such as photovoltaics and wind power have significantly decreased. Contents History and Current Status of the World Nuclear Industry The Dramatic

Prealgebra-Lynn Marecek 2015-09-25 "Prealgebra is designed to meet scope and sequence requirements for a one-semester prealgebra course. The text introduces the fundamental concepts of algebra while addressing the needs of students with diverse backgrounds and learning styles. Each topic builds upon previously developed material to demonstrate the cohesiveness and structure of mathematics. Prealgebra follows a nontraditional approach in its presentation of content. The beginning, in particular, is presented as a sequence of small steps so that students gain confidence in their ability to succeed in the course. The order of topics was carefully planned to emphasize the logical progression throughout the course and to facilitate a thorough understanding of each concept. As new ideas are presented, they are explicitly related to previous topics."--BC Campus website.

A First Course in Design and Analysis of Experiments-Gary W. Oehlert 2000-01-19 Oehlert's text is suitable for either a service course for non-statistics graduate students or for statistics majors. Unlike most texts for the one-term grad/upper level course on experimental design, Oehlert's new book offers a superb balance of both analysis and design, presenting three practical themes to students: • when to use various designs • how to analyze the results • how to recognize various design options Also, unlike other older texts, the book is fully oriented toward the use of statistical software in analyzing experiments.

Bricks, Sand, and Marble-Robert Grathwol 2015-08-15 For more than four decades after the end of World War II in 1945, the security interests of the United States focused on tensions with the Soviet Union. The contest, which became known in 1948 as the Cold War, pitted two fundamentally opposed ideologies and political systems against one another across the so-called Iron Curtain in Europe. As tensions between the United States and the Soviet Union mounted, the United States increased its overseas military presence. The North Atlantic Treaty Organization (NATO), established in 1949, created an alliance led by the United States for the mutual defense of Western Europe. NATO embodied the two foreign policy cornerstones of the United States-deterrence and containment of Soviet expansion of influence and control. The attack in June 1950 by North Korea on its neighbor, South Korea, prompted the United States to extend its policy of geographic containment of Soviet ambitions. Through negotiations with several Mediterranean countries, the United States established air bases that placed U.S. military aircraft in position to strike the Soviet Union should any conflict of arms threaten world stability. This history examines the work of the U.S. Army Corps of Engineers in military construction in the Mediterranean Basin (including northern and northeastern Africa) and the Middle East, which created the infrastructure that made the policies of deterrence and containment possible. This work included not only construction in support of the U.S. Army and U.S. Air Force in these areas but also work executed on behalf of our Middle East allies paid for with funds they provided. A remarkable story in its own right, the history becomes even more important, given events in the region since 1990, by providing a background understanding of the present role and position of the United States in that vital region.

Work Won't Love You Back-Sarah Jaffe 2021-01-28 Whether it's working for free in exchange for 'experience', enduring poor treatment in the name of being 'part of the family', or clocking serious overtime for a good cause, more and more of us are pushed to make sacrifices for the privilege of being able to do work we enjoy. Work Won't Love You Back examines how we all bought into this 'labour of love' myth: the idea that certain work is not really work, and should be done for the sake of passion rather than pay. Through the lives and experiences of various workers--from the unpaid intern and the overworked teacher, to the nonprofit employee, the domestic worker and even the professional athlete--this compelling book reveals how we've all been tricked into a new tyranny of work. Sarah Jaffe argues that understanding the labour of love trap will empower us to work less and demand what our work is worth. Once freed, we can finally figure out what actually gives us joy, pleasure and satisfaction.
